(54) Title: A METHOD AND ARRANGEMENT FOR AN IMPROVED BUFFER SOLUTION WITHIN A COMMUNICATION NETWORK SWITCH

Generic model of simulated switch.

(57) Abstract: In asynchronous optical packet switches, scheduling packets from a buffer randomly will cause less efficient utilisation of the buffer. Additionally, reordering of packets may cause problems for service quality demanding applications. According to the present invention a new electronic buffer scheduling algorithm is proposed and a switch utilizing this algorithm is disclosed. The algorithm is designed for utilizing the buffer resources efficiently, still avoiding serious packet reordering.
